Hi Milton,

Dick sent a request for research into the object you photographed 08/05/07. My results indicate the object is most likely an LNG storage tank located at the same position as the object in your photo. LNG tanks can have a concave or a convex roof depending on how much product is currently in the tank. They are also capable of atmospheric venting, which would explain the vapor trail in the photo.

Hope this possible explanation is helpful.

Yours in research,
John English
